## **KWIKstarters**

Preassembled or build from stock – Easy, fast, economical enclosed starters for applications up to 30HP

KWIKstarters are equipped with Overload protection as standard

Sprecher + Schuh offers a broad selection of pre-assembled or "build-from-stock" starters housed in a high impact, nonmetallic, cUL Approved, Type 1, 12, 4, 4X enclosure. Built for convenience, space savings and economy, KWIKstarters are efficiently designed to use stock CA7 contactors and CEP7 overloads usually stocked by distributors. Contactor and overload are either pre-wired and premounted onto the enclosure's built-in DIN-rail or may be ordered as separate components. Ample knockouts and open terminals guarantee quick, no fuss wiring.

## Sized for most industrial applications

KWIKstarters control motors up to 30HP @ 460V in two sizes of enclosures, measuring only 208 x 98mm (7.4" x 3.9") or 250 x 125mm (9.85" x 4.93") for our larger sizes. This covers over 85% of industrial motor control applications in a very compact package that can be mounted adjacent to or directly on equipment.

Solid state overload options

KWIKstarters are

available with our

advanced CEP7 Solid

State Overload Relay

KWIKstarters, sizes 9 to 23 amps, are supplied with Sprecher+Schuh's CEP7 solid state overload relay. The CEP7 overload is also standard on larger sizes (sizes 30 to 43 amps). The CEP7 solid state overload relays measure motor current directly through integrated current transformers and on board electronics. The electronics provide increased accuracy and numerous other advantages over electromechanical relays. Learn more about Sprecher + Schuh overload relays in Section B of this catalog.

## Build it yourself...

KWIKstarters may be assembled from stock components. Just grab a CA7 contactor and overload of your choice and snap them into the enclosure. Minimal wiring is required and assembly can be completed in minutes.

Start-Stop or Reset only

Hand-Off-Auto with Pilot Light

Emergency Stop

Forward-Stop-Reverse options

Combination Kwikstarters

## **CX7 KWIKstarters**

## Type E/F Combination Motor Controllers

KTA9 can be applied in combination with a CA7 contactor for remote control and an enclosure with matching environmentally approved thru-the-door handle disconnect mechanism to meet all requirements for a Construction Type E or F Combination Starter. This selection of individual Combination starters are smaller and are less expensive than Classic Construction Type A (Fusible), or Type C (Thermal-magnetic Molded Case Circuit Breaker), as offered in the following pages.

Sprecher + Schuh has developed a KWIKStarter version of the Combination Motor Controller which can be easily field assembled or can be purchased as a factory assembly. For details and catalog number selection on these economical combination starter alternatives turn to page F98.

## Why Type E/F?

NEC430-53.C.1 defines that the shortcircuit protection of a single motor branch circuit shall be provided by a set of fuses or a thermal-magnetic molded case circuit breaker. Alternatively NEC 430-53.C.6 also permits the use of a Self-protected Combination Motor Controller can be used to not only provide short-circuit protection for a single motor branch circuit but also provide a means of disconnect and overload protection. Selfprotected Combination motor controllers like KTA9 can be combined with CA7, providing a coil for cover control or remote operation. This results in a Construction Type E or Type F (based on selection depending on published UL ratings) Combination starter per UL508. For details of UL, NEC and CSA application standards and rules please see our online white paper, Applying KT9 Motor Controllers.

600	550V	600V	~	Common

#### **Control Circuit Note**

Common: Coils are assumed to be common with the line voltage and will be connected to the line source (L1-L2) per the table.
 Separate: Coils are assumed to be from a separate source and will not be connected to the line source per the table.

#### **Ordering Instructions**

Specify Catalog Number	
Replace ( <b>★</b> ) with Coil Code	See this page
Replace ( <b>♦</b> ) with O/L Relay	See page C30

**Important Note:** KWIKstarters (Q1 dim.) are only designed to accommodate CEP7 Solid State Overload Relays. Select O/L Relay Code from page C30.

- KWIKstarters are designed for three-wire control circuits. Two-wire (maintain) control can be accomplished by adding pushbutton latch KS7-PLA.
- A special design NO auxiliary contact (Cat.# KS7-PCK) is used as the holding circuit interlock, as well as, the START button interface. It is not available for other use.
- **③** Refer to page C33 for dimensional information.
- STOP button also functions as RESET button. Plastic Bezel is standard.
- Other voltages available, see Section A.

#### Coil Codes @

A.C.	Voltage	Range	Control	Source
<b>Coil Code</b>	50 Hz	60 Hz	CBK7	CAK7
24Z	24V	24V 24V		Separate
120	110V	110V 120V		Separate
220W	200-220V	200-220V 208-240V		Common
D.C.	Voltage	Range		
Coil Code	VE	)C		
12E	12	2V		
24F	24	1V		

#### **Control Circuit Note**

- **Common:** Coils and pilot devices in the control circuit are assumed to be common with the line voltage and will be connected to the line source (L1-L2) per the table.
- **Separate:** Coils and pilot devices in the control circuit are assumed to be from a separate source and will not be connected to the line source per the table. Line Voltage not listed: (i.e.: 480 and 575 VAC) require a separate control source (i.e.: 120 VAC). D7D pilot devices are rated 300 VAC maximum.
- This is a factory assembly. The KS7-COS1 (Q1) enclosure does not include knock-outs for field assembly of this starter.
- Uses D7D-P4N\_Red Monolithic "Run" pilot light with LED bulb. Pilot light voltage to match coil voltage for 24, 120, 240 VAC control. Red "Run" Light can be changed for Green. Change +1R7 to +1G7. For example, CAK7-9-\*-◆-P0+1R7 becomes CAK7-9-\*-◆-P0+1G7.
- Uses D7D-SM32x20 Monolothic 3-position selector switch for maintain control, HAND-OFF-AUTO function with legend plate.
- Prefer to page C32 for wiring and dimensional information. This is a clam-shell enclosure design with wires to cover controls.
- One NO auxilliary for customer use. There is no room for additional auxilliaries.
- CA7-9E...23E with electronic coils are not interchangeable with non-electronic DC or AC coils.

#### **Control Circuit Note**

Common: Coils are assumed to be common with the line voltage and will be connected to the line source (L1-L2) per the table.Separate: Coils are assumed to be from a separate source and will not be connected to the line source per the table.

#### **Ordering Instructions**

Specify Catalog Number	
Replace ( <b>★</b> ) with Coil Code	See this page
Replace ( <b>♦</b> ) with O/L Relay	See page C30

**Important Note:** KWIKstarters are only designed to accommodate CT7N Thermal Overload Relays or CEP7 Solid State Overload Relays. Select O/L Relay Code from page C30.

- KWIKstarters are designed for three-wire control circuits. Two-wire (maintain) control can be accomplished by adding pushbutton latch KS7-PLA.
- A special design NO auxiliary contact (Cat.# KS7-PCK) is used as the holding circuit interlock, as well as, the START button interface. It is not available for other use.
- ③ Refer to page C33 for dimensional information.
- STOP button also functions as RESET button. Plastic Bezel is standard.
- Other voltages available, see Section A.
- Use CT7N or CEP7-ED/CEP7-EE overload.
- CAN7-12E...16E with electronic coils are not interchangeable with nonelectronic DC or AC coils.
