

Series L8 UL1077 Supplementary Protectors

Supplemental short circuit protection for a variety of applications up to 63 Amps

Sprecher+Schuh Series L8 Supplementary Protectors provide supplemental overcurrent protection for control circuits, solenoids, actuators, appliances, business equipment and a range of other applications where a high performance current limiting device is required. Advanced features and global approvals make them ideal for use in equipment installed throughout the world.

Sprecher+Schuh Supplementary Protectors also incorporate a trip-free mechanism - ensuring that the device operation cannot be defeated by holding the operator in the ON position.

Easy installation

Sprecher+Schuh Supplementary Protectors mount on a standard 35mm DIN-rail. Wire terminals accept multiple conductors, and UL 508 approved bus bars can be used to quickly distribute power to many Supplementary Protectors simultaneously. In addition, power to the circuit breakers can be fed from the line or load side.

Global approvals for worldwide acceptance

Series L8 Supplementary Protectors are UL Recognized for use in the United States in accordance with NFPA 79 (NEC, National Electrical Code). The devices comply with UL 1077 and CSA 22.2 No.235, meeting the requirements for supplementary protectors intended for use as overcurrent protection where branch circuit protection is not required, or is provided by another device such as a fuse or molded case circuit breaker. These Supplementary Protectors also comply with IEC 60947-2 for use in commercial and residential applications and are CE marked.

Broad product range

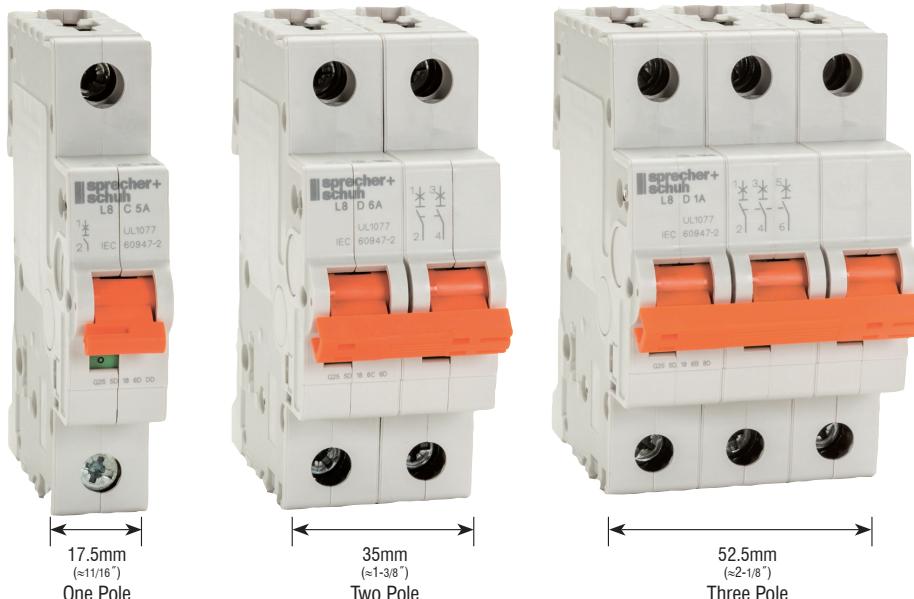

Series L8 Supplementary Protectors are available in up to 20 different current ratings from 0.5A to 63A, in one, two and three pole configurations. Over 180 base models are available with a full compliment of accessories.

Devices can be used in applications up to 480V AC and 48V DC with interrupting capacities up to 10kA.

Safety features provide enhanced protection

The terminals of Series L8 Supplementary Protectors provide IP20 protection to guard against accidental contact with live parts.

To aid troubleshooting, a color-coded indicator provides positive visual indication of the device status (green for OFF, red for ON) and isolation function.

Circuit
Protection

Three trip characteristics

All Sprecher+Schuh L8 Supplementary Protectors are available with three different tripping characteristics, Type "B", "C", and "D". The tripping characteristic defines the device's speed of response (trip-time) to various levels of overcurrent. Figure 1 shows trip-time versus overcurrent for Type B, C, and D devices. The time-current characteristics enable the device to be optimally matched to the application. For example, PLC outputs that can only tolerate minimal overcurrents are best protected by Supplementary Protectors with Type B trip characteristics.

Sprecher+Schuh L8 Supplementary Protectors are also current limiting - interrupting fault currents within one half cycle. Current limiting devices protect circuit components from damage by reducing the peak let-through current which causes damaging magnetic forces

and let-through energy which generates heat.

Type "B" Characteristic

Developed primarily to protect conductors and low level signal devices such as PLCs. Instantaneous trip is three to five times the rated current of the Supplementary Protector ($3\text{--}5 \times I_n$). The fast trip time of these devices minimizes damage to control circuit conductors from low-level faults.

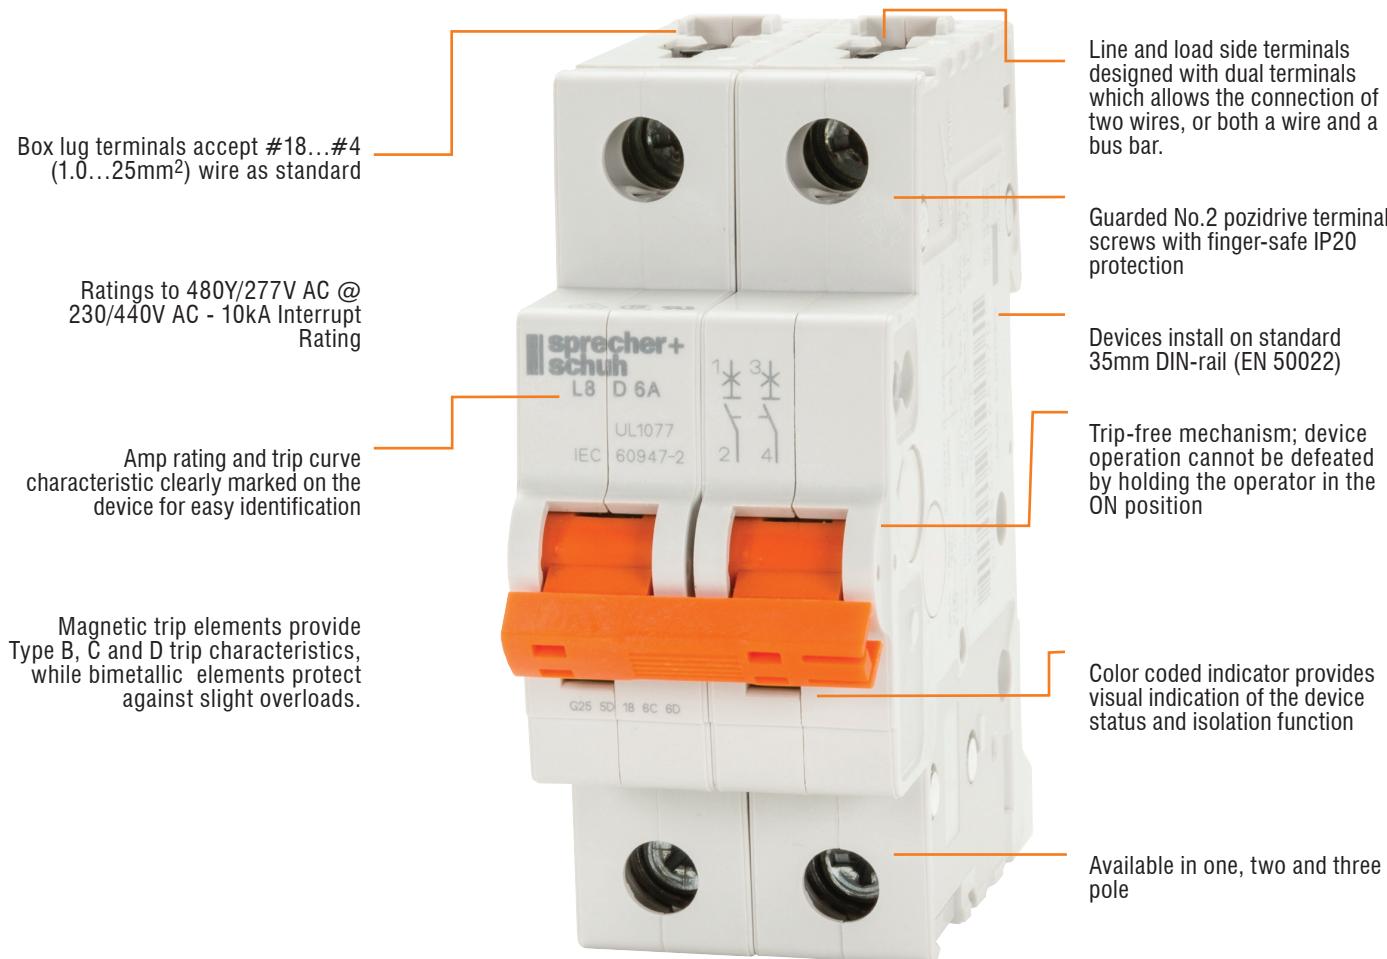

Type "C" Characteristic

Developed primarily for applications with moderate inrush currents such as lighting, control circuits and coils, computers and appliances. Instantaneous trip is five to ten times the rated current of the Supplementary Protector ($5\text{--}10 \times I_n$). The higher instantaneous trip level prevents nuisance tripping, and components being protected can typically withstand higher fault currents without being damaged.

Type "D" Characteristic

Developed primarily for applications with high inrush currents, i.e., transformers, power supplies and heaters. Instantaneous trip is ten to twenty times the rated current of the Supplementary Protector ($10\text{--}20 \times I_n$). The high instantaneous trip level prevents nuisance tripping, and components being protected can typically withstand higher fault currents without being damaged.

Note: In order to use MCB at 60°C you must use cable suitable for this temperature. Any third party certifications are not covering this ambient temperature rating.

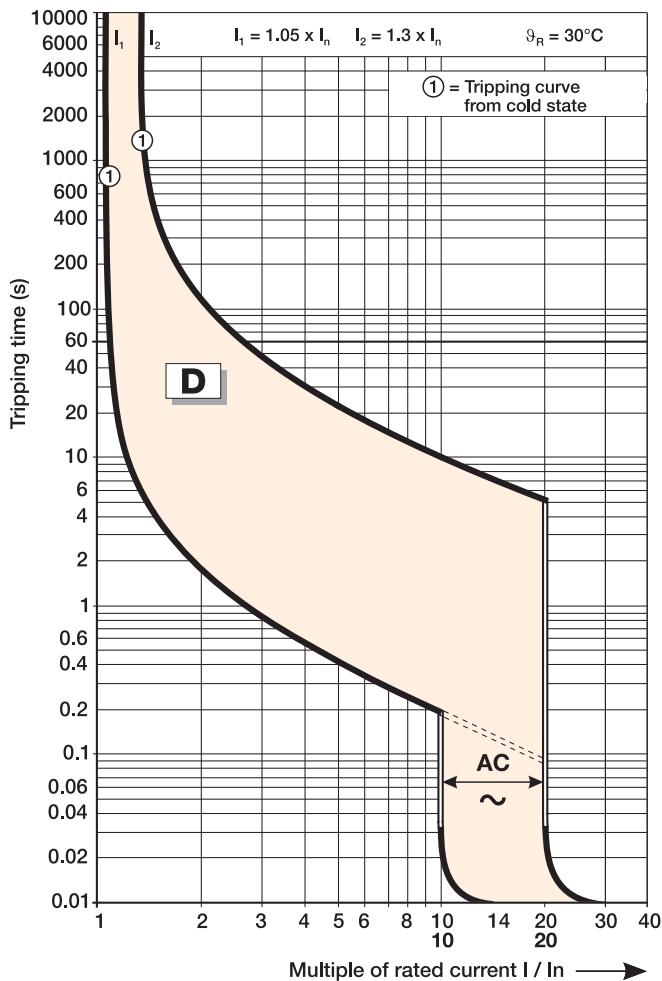

Tripping Characteristics - B and C Curve

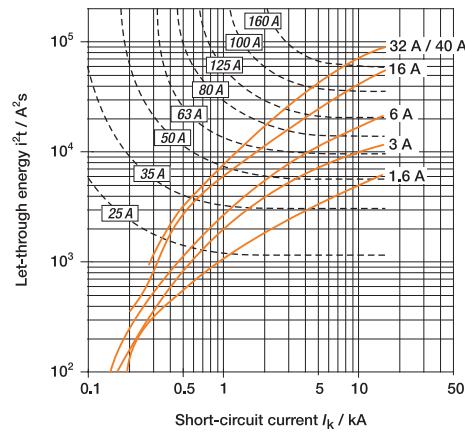

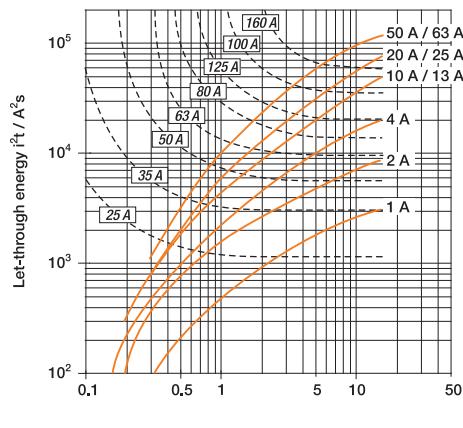

B and C Curve - 230/400V AC Let-through Energy

Tripping Characteristics - D Curve

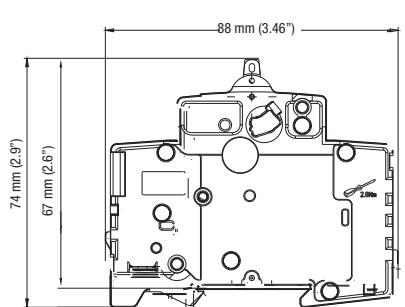

D Curve - 230/400V AC Let-through Energy

L8 Supplementary Protectors (Curve B, C & D)

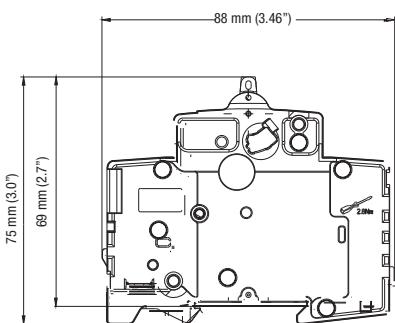

Dimensions are in millimeters (inches). Dimensions not intended for manufacturing purposes.

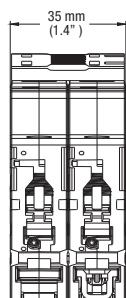

1-Pole

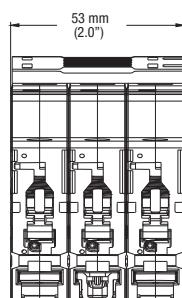

1-Pole

2- & 3-Pole

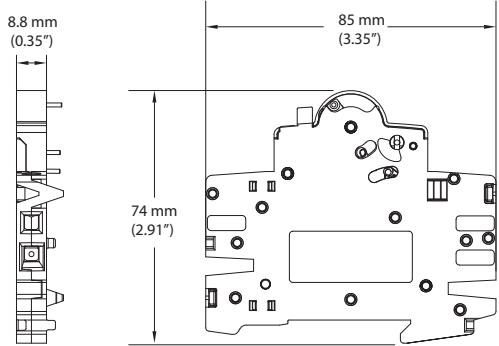

2-Pole

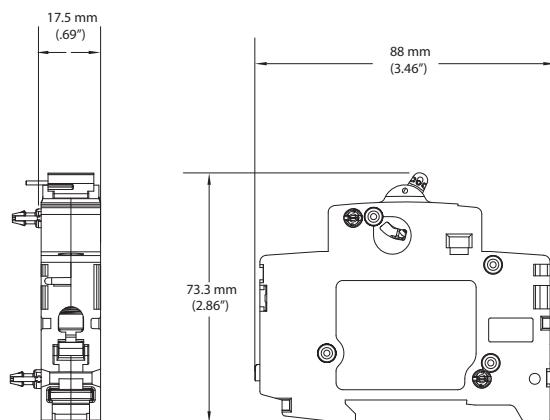

3-Pole

Auxiliary Contact/Signal Alarm (L8-ASCR3)

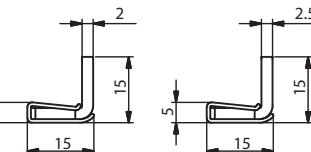

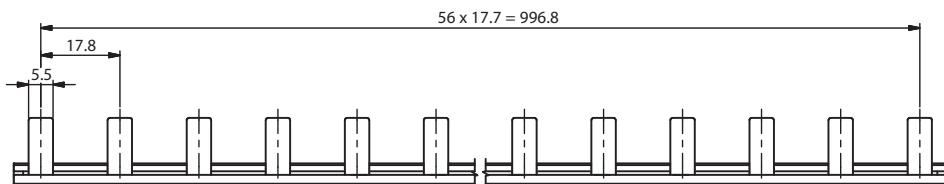

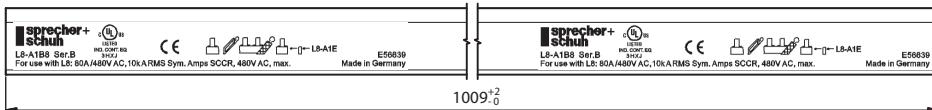

Shunt Trip Modules (L8-AST1/2)

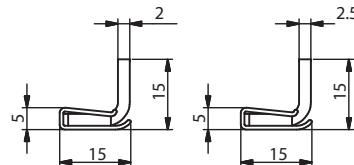

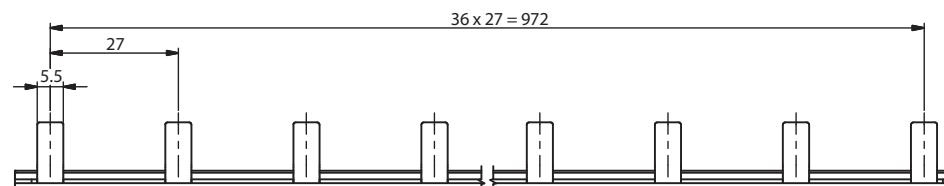

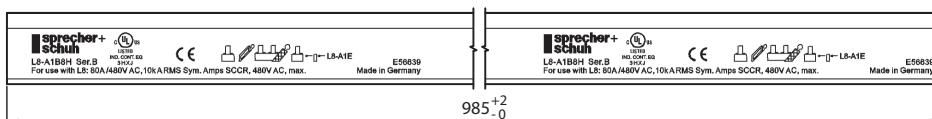

L8 - 1-Pole Bus Bars (L8-A1B...)

Dimensions are in millimeters (inches). Dimensions not intended for manufacturing purposes.

L8-A1B8 L8-A1B1

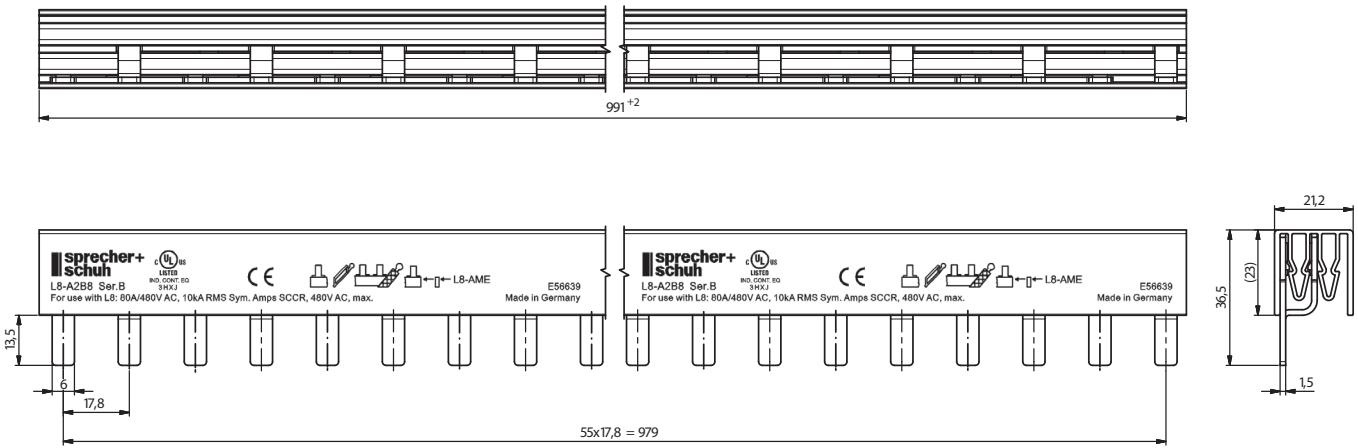

L8 - 1-Pole Bus Bars with Auxiliary (L8-A1B...H)

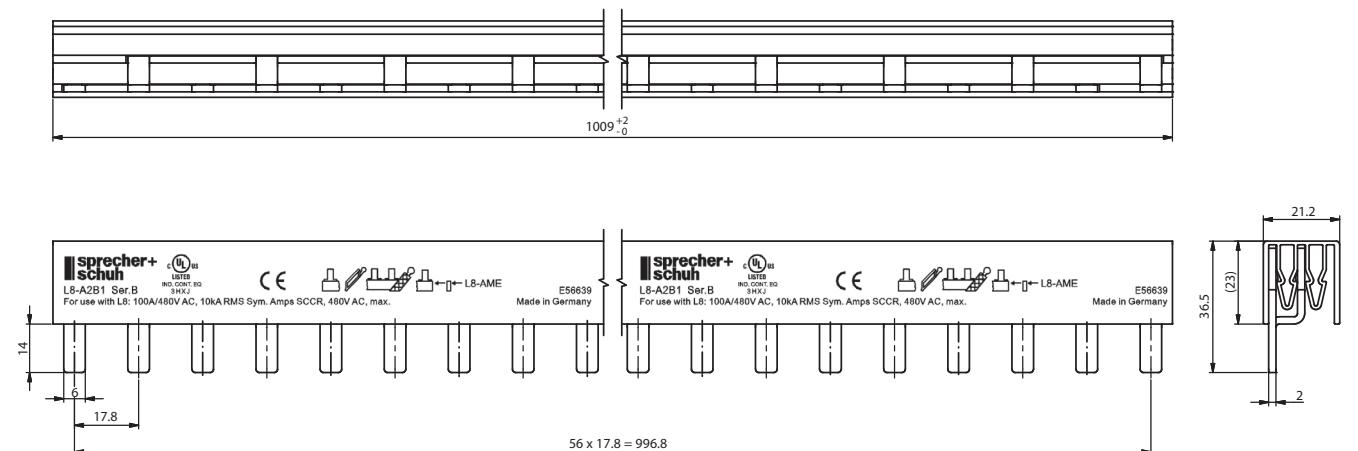

L8-A1B8H L8-A1B1H

L8-A2B8 - 2 Pole Bus Bars

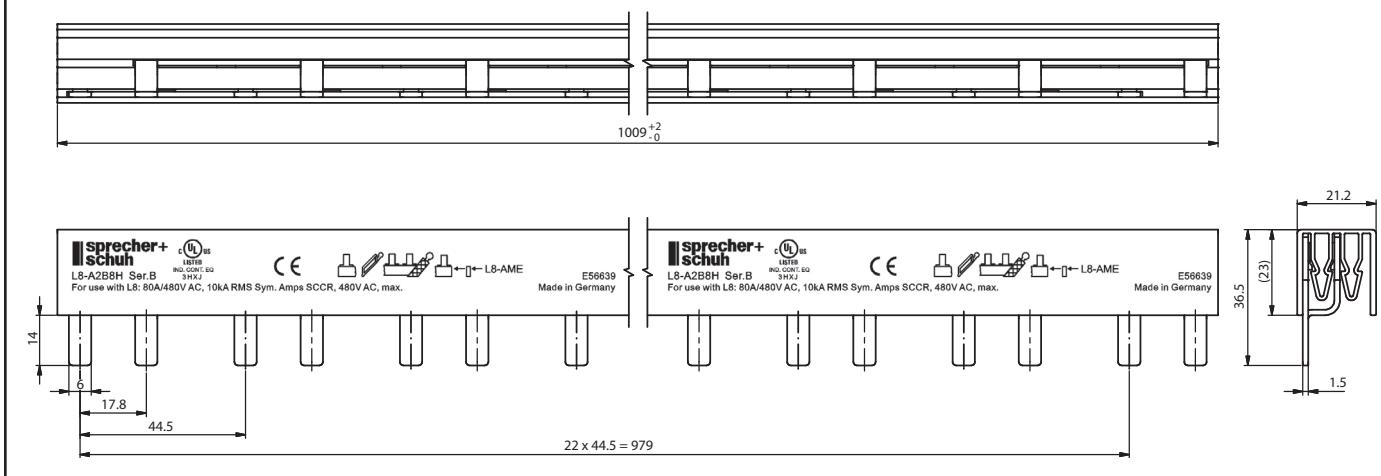

Dimensions are in millimeters (inches). Dimensions not intended for manufacturing purposes.

L8-A2B1 - 2 Pole Bus Bars

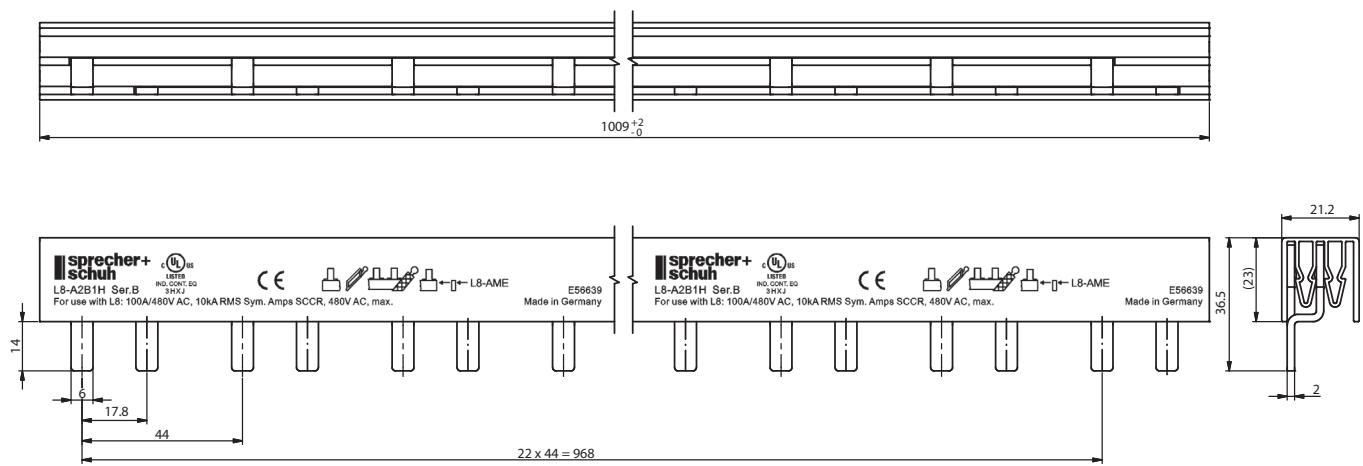

L8-A2B8H - 2 Pole Bus Bars w/ Auxiliary

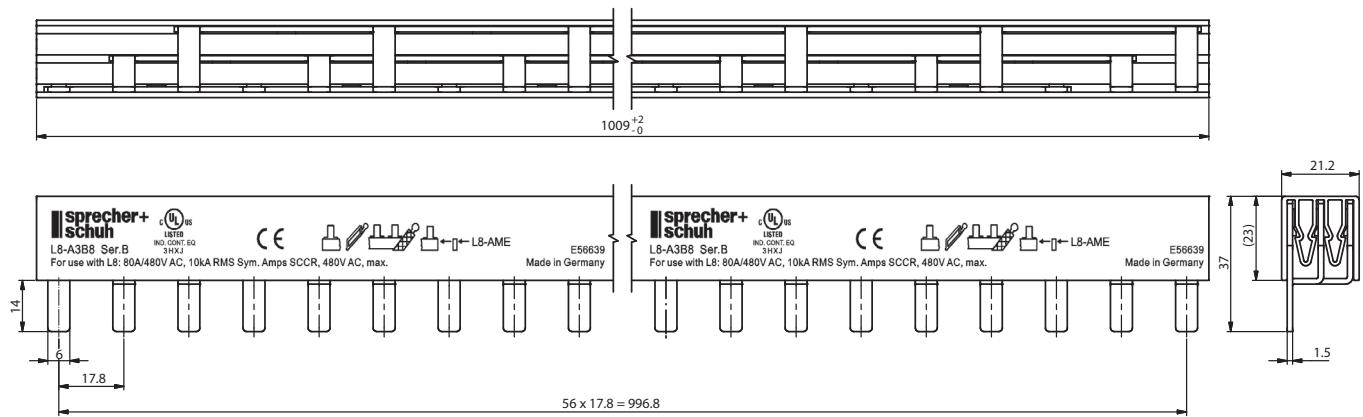

L8-A2B1H - 2 Pole Bus Bars w/ Auxiliary

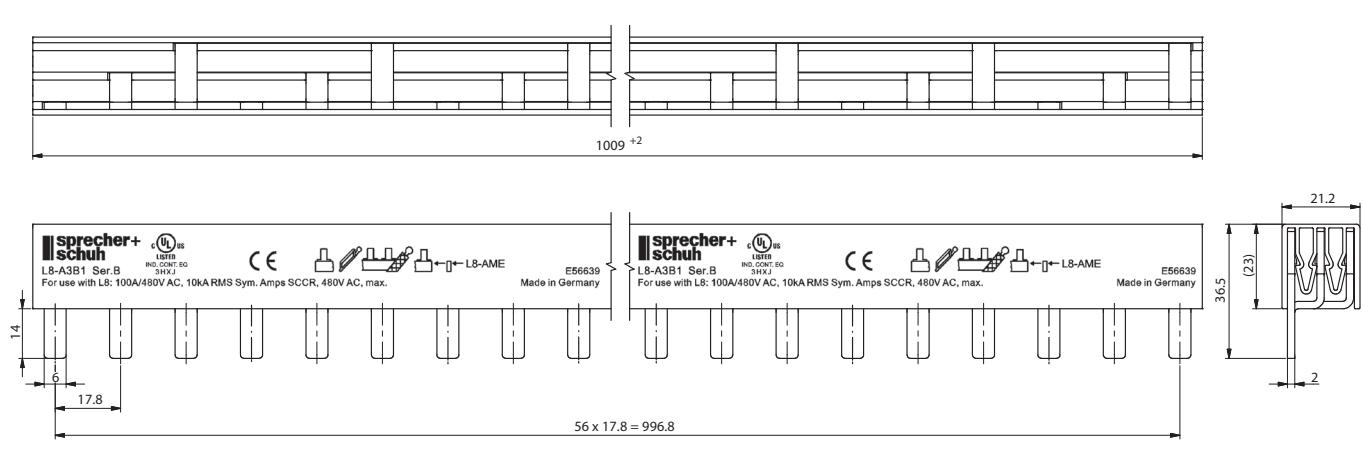

Dimensions are in millimeters (inches). Dimensions not intended for manufacturing purposes.

L8-A3B8 - 3 Pole Bus Bars

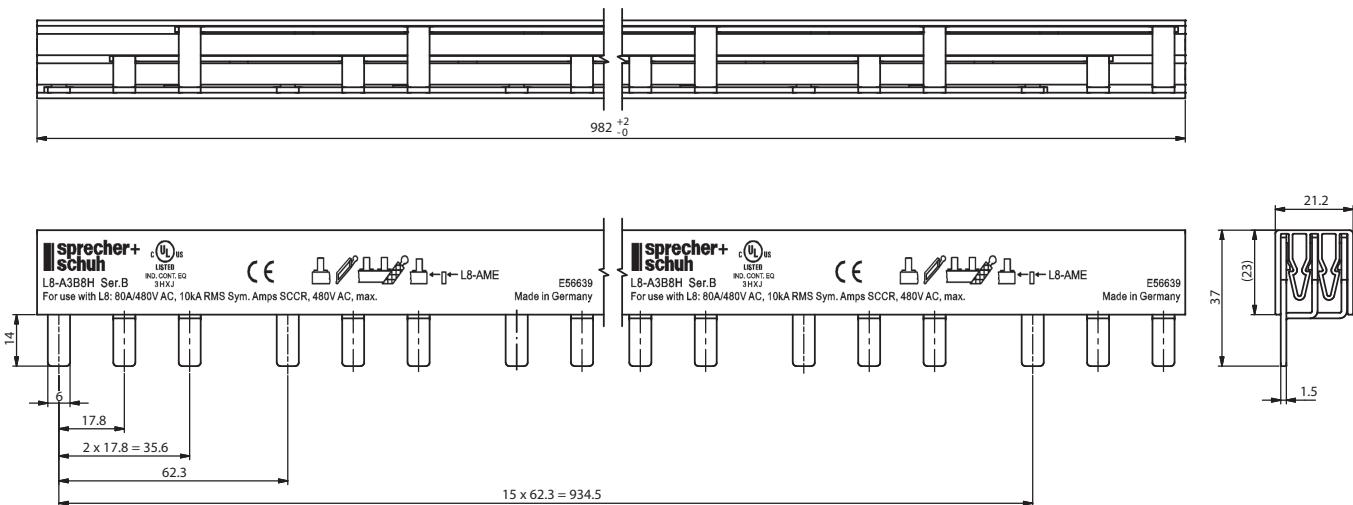

L8-A3B1 - 3 Pole Bus Bars

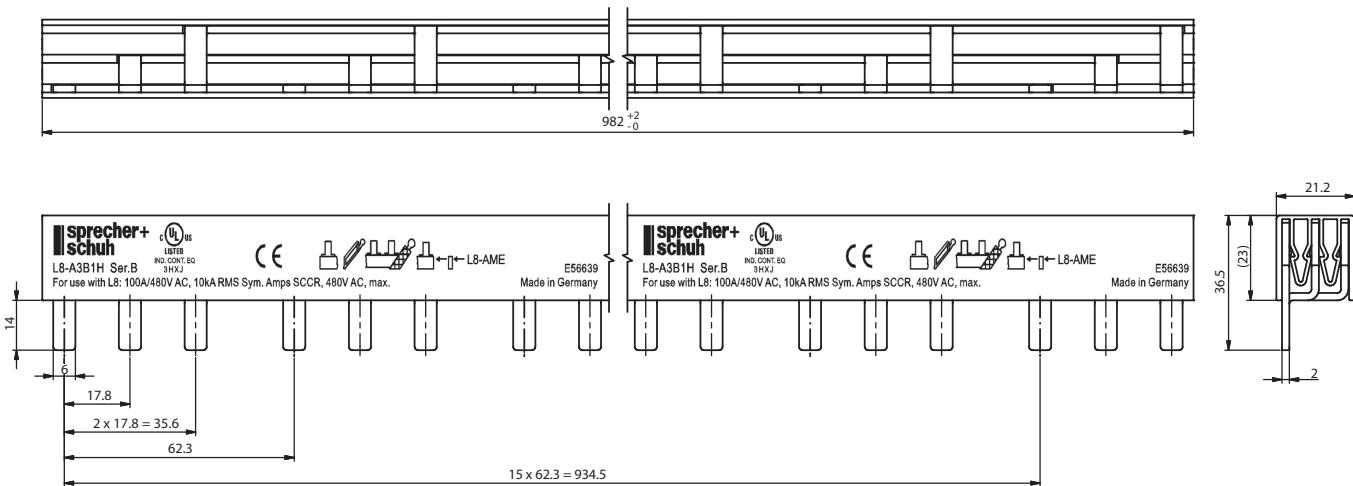

L8-A3B8H - 3 Pole Bus Bars w/ Auxiliary

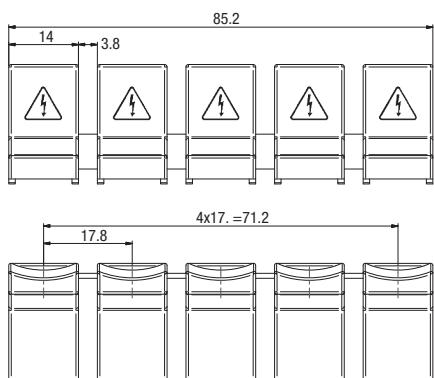

Dimensions are in millimeters (inches). Dimensions not intended for manufacturing purposes.

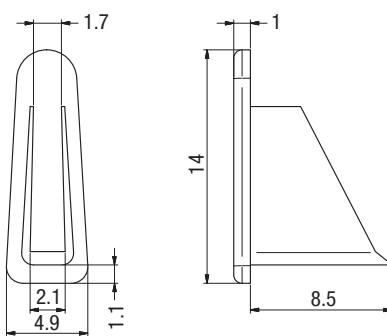

L8-A3B1H - 3 Pole Bus Bars w/ Auxiliary

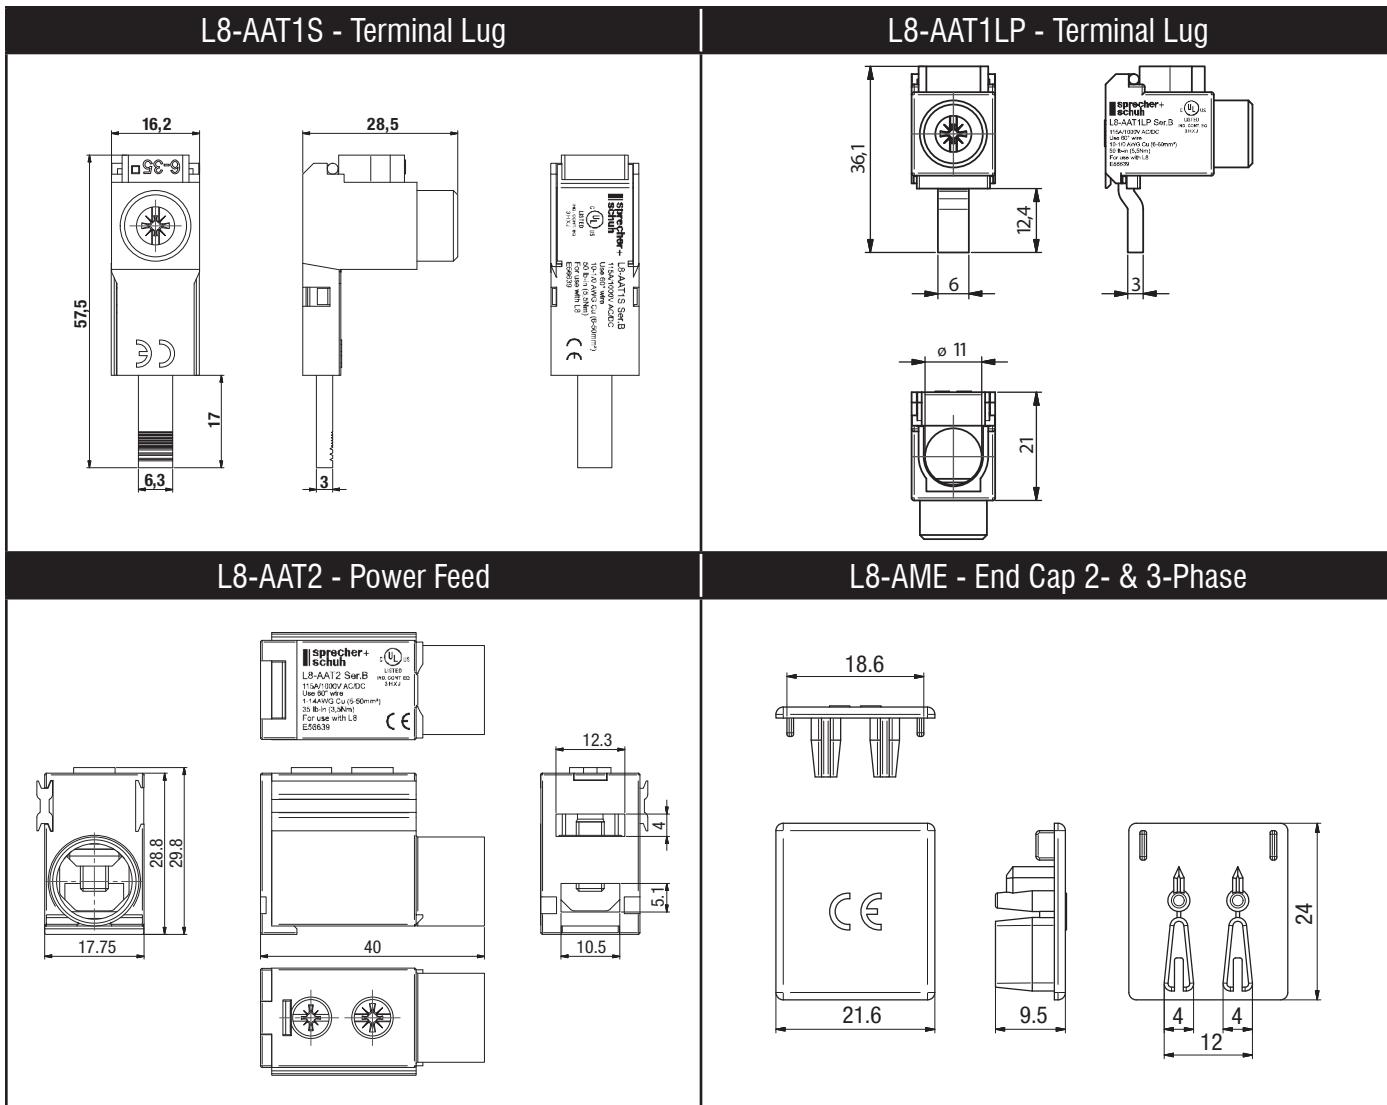

L8-AAP - Protective Shroud

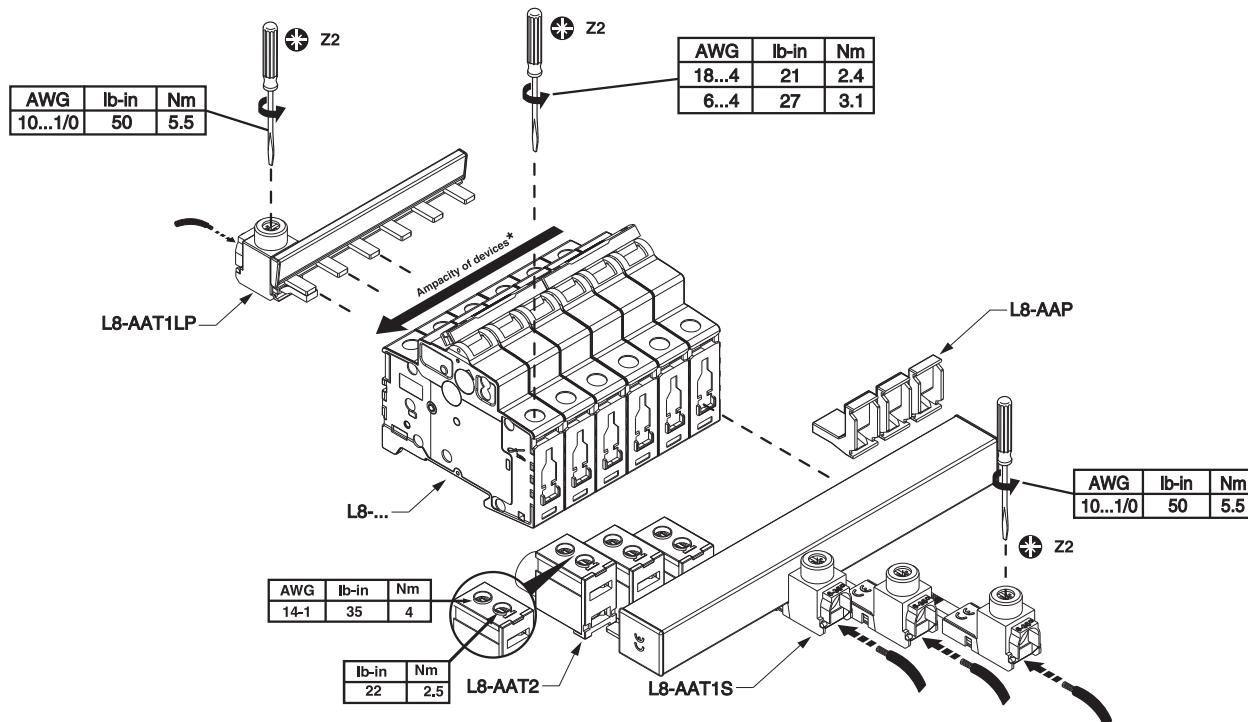

L8-A1E - End Cap 1-Phase
