supply block	KT4-C-WT	functional replacement →	KT5-32-A3N	supply block (flat)
			KT5-32-A3NH	supply block (high)
blank space cover	KT4-C-WS	functional replacement →	KT5-WSN	blank space cover

*** Definition of Replacement Type :**

Functional Replacement: a product or family that can be used to replace an earlier product or family and emulates the old one with minimal changes to an existing application. A functional replacement means that there is a form, fit or function change, but that it is backward compatible.

Engineered Replacement: a product or family that can be used to migrate an earlier product or family and requires engineering changes to existing applications. An engineered replacement means that there is a form, fit or function change of the application that is not backward compatible and that does not emulate the earlier product.
